integration

SERVICE: New Equipment Installation

Following the new machinery installation, the production line is more effective and productivity has risen. And, because of their familiarity with food environments, AES were able to do this without any negative impact on Kerry's strict hygiene requirements.

“ We’ve been working with AES for over 20 years and know we can trust them to respect our strict hygiene requirements whilst delivering a first-rate job. We return to them time and again and look forward to many more years of working together. ”

Tadhg Lyne, Kerry Foods Engineering Director

CHALLENGES

Food ingredient and flavour specialists Kerry Group needed to increase their productivity. This was no ordinary machine installation, an intelligent approach was called for. Skilled engineers from AES needed to work closely with specialist machinery manufacturers to make sure the new machines were carefully integrated with all parts of the existing production line – a complicated but necessary procedure.

SOLUTION

AES installed complex new machinery and integrated its operation with the existing production line in order to boost productivity. Work included installing a new 630amp electrical sub-main to feed the new plant, new containment (including stainless steel) and cabling. On completion AES was commissioned to review the production line's ability to meet requirements.

ABOUT

Kerry Group is a world leader in food ingredients and flavours serving the food and beverage industry. They are also a leading supplier of added value brands and customer branded foods to Ireland and the UK.
